

# **Vayyar Home<sup>TM</sup>** **Ceiling Mounting** **Best Practices**

# There are two ways to mount the device on a ceiling

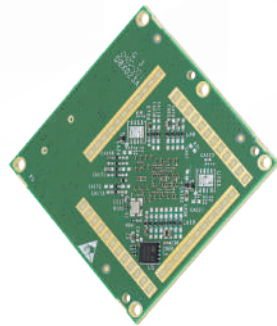

# Why mount the device at a 45-degree rotation?

The RF board and chip (vBlu) inside the Vayyar Home device are set at a 45-degree angle.

Mechanics/Front plastic casing

RF module that contains a full 40 printed antennae array and supply circuit

Vayyar RF/DSP fully integrated chip

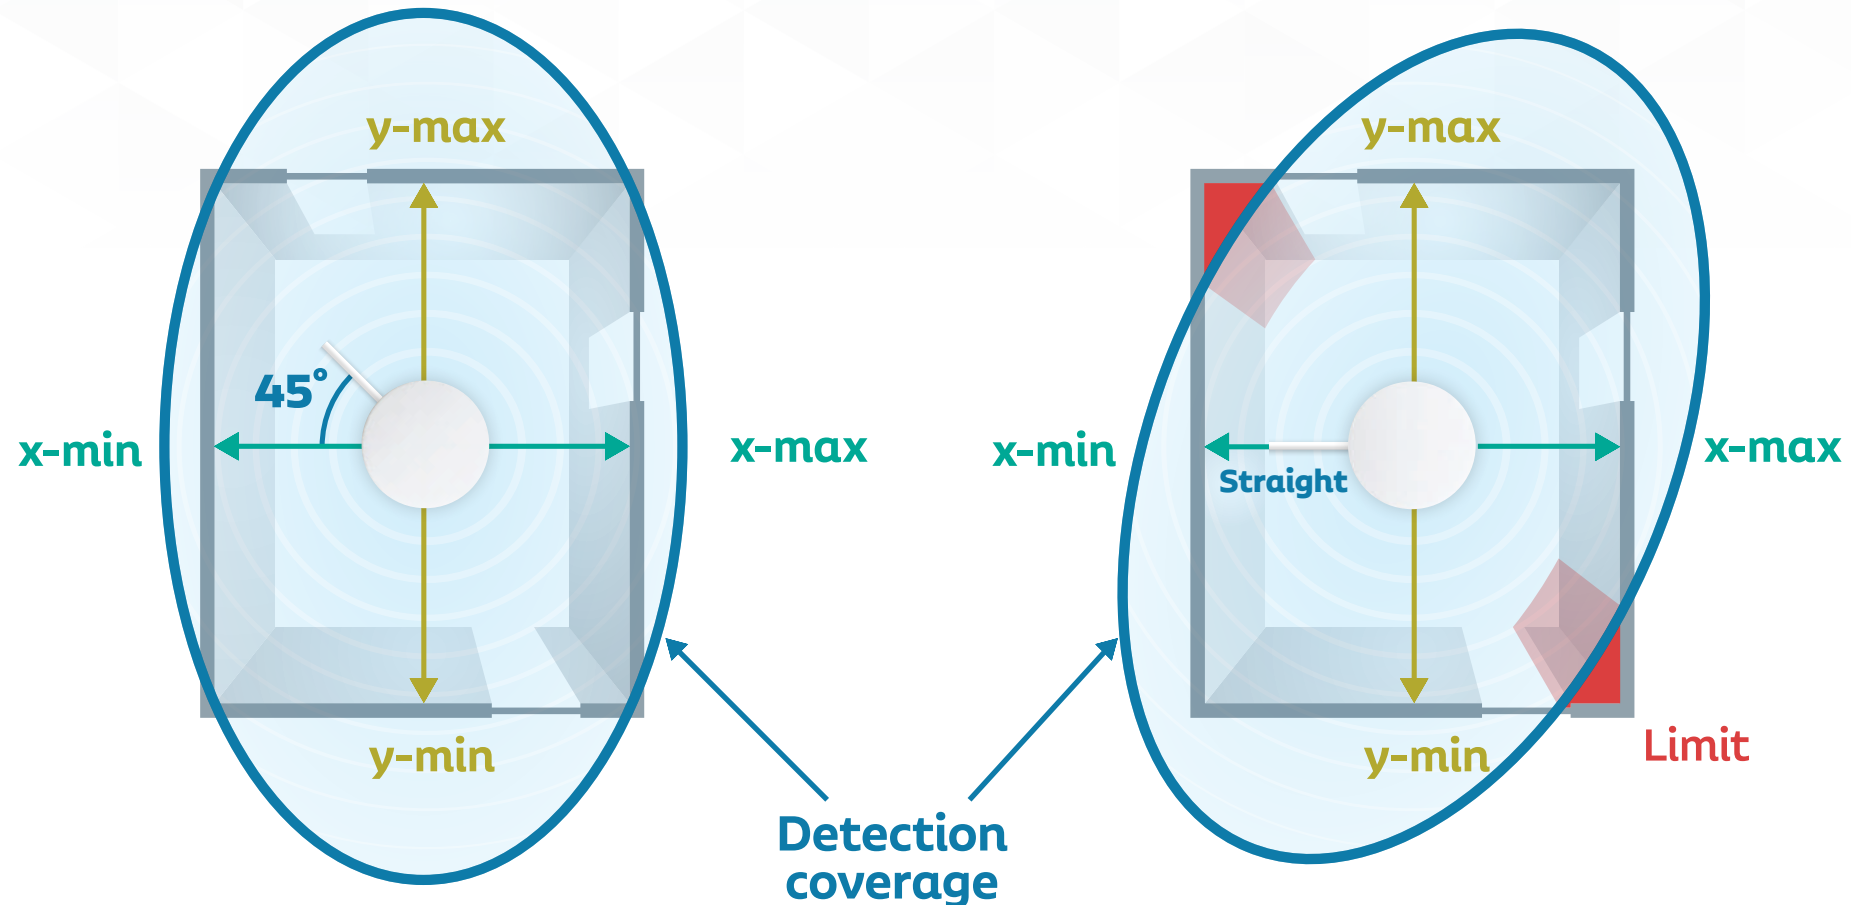

Digital board that contains the communication module and host (ESP32)

Mechanics/Back plastic casing

# Mounting at a 45-degree rotation provides better coverage at a distance

# When mounting the device on the ceiling:

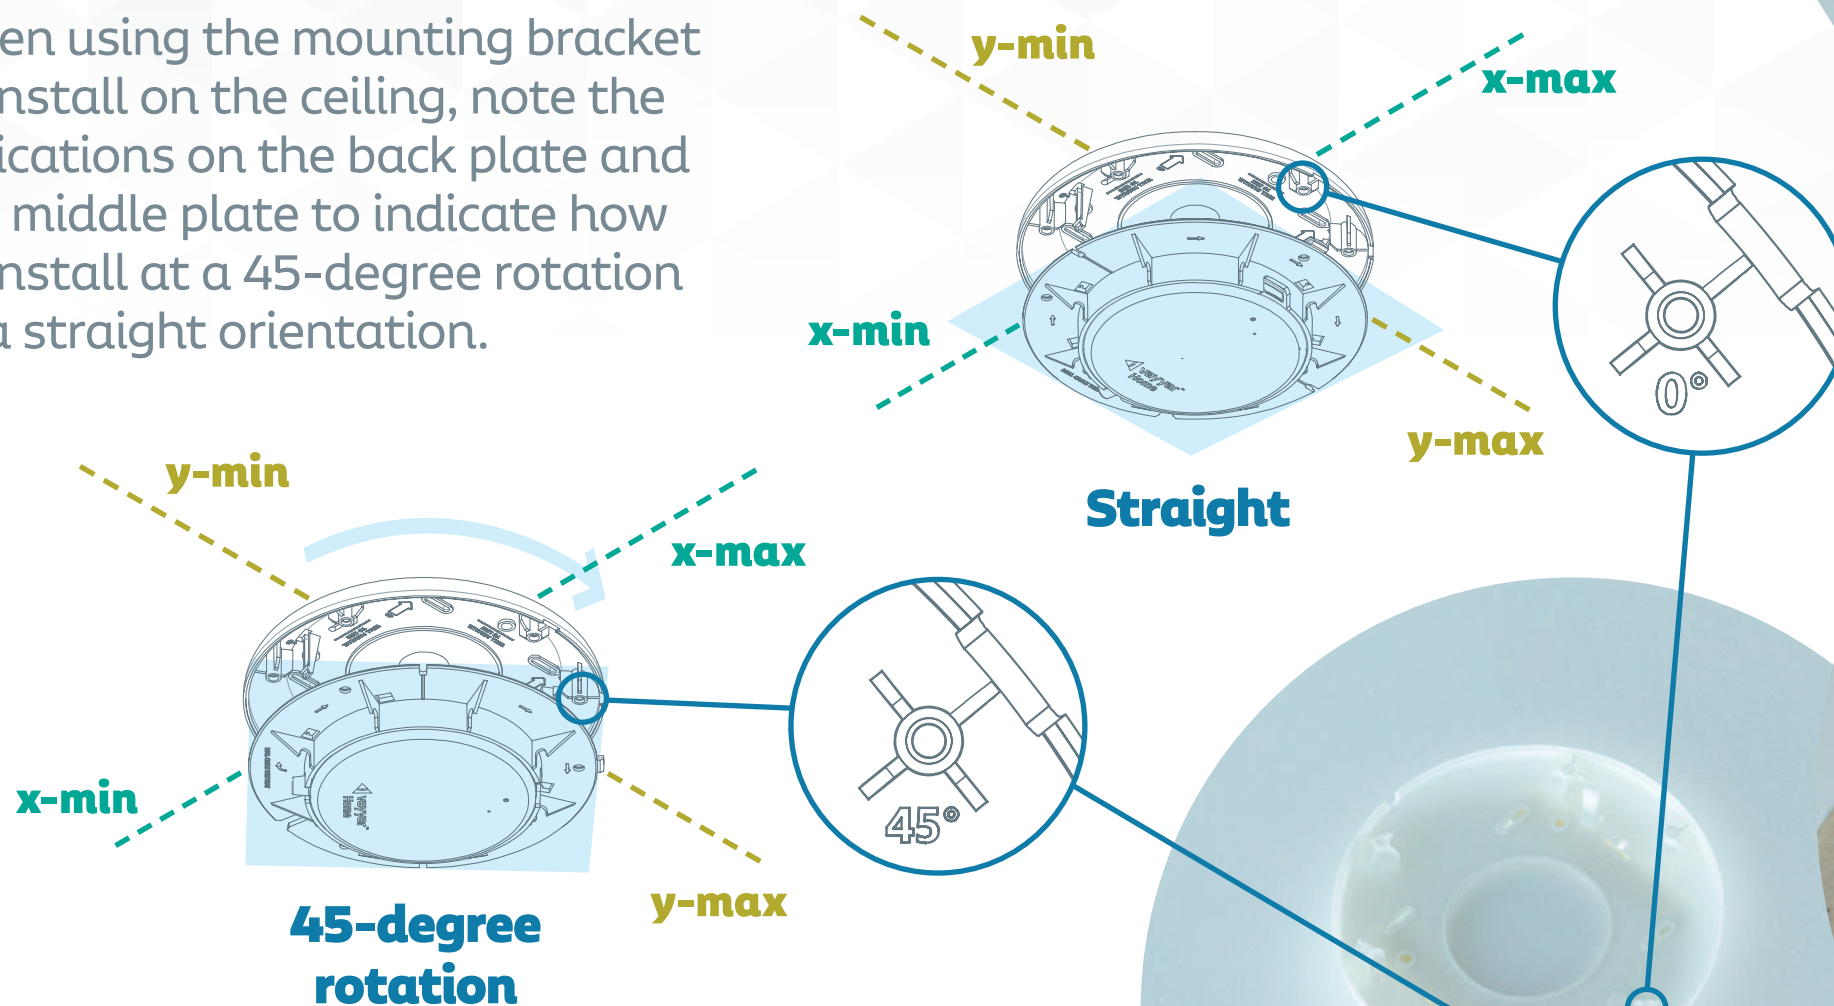

- ✓ **Make sure** the room is no larger than 4m x 5m / 13' x 16'4", with a maximum of 2m / 6'6" in each direction across the width (x-axis) and 2.5m / 8'2" in each direction down the length (y-axis).
- ✓ **Make sure** the ceiling height is between 2.3m / 7'6" and 3m / 9'9" from the floor.
- ✓ **Make sure** the device is mounted flat and directly on the ceiling.

- ✓ **Make sure** there's a power outlet within reach of the device.
- ✗ **Don't** mount near a ceiling fan or hanging light.
- ✗ **Don't** mount on a light fixture or smoke alarm; it needs to be mounted on the ceiling itself.
- ✓ **Make sure** the front of the device, with the Vayyar logo, is facing the floor.

# Installing with the mounting bracket

When using the mounting bracket to install on the ceiling, note the indications on the back plate and the middle plate to indicate how to install at a 45-degree rotation or a straight orientation.

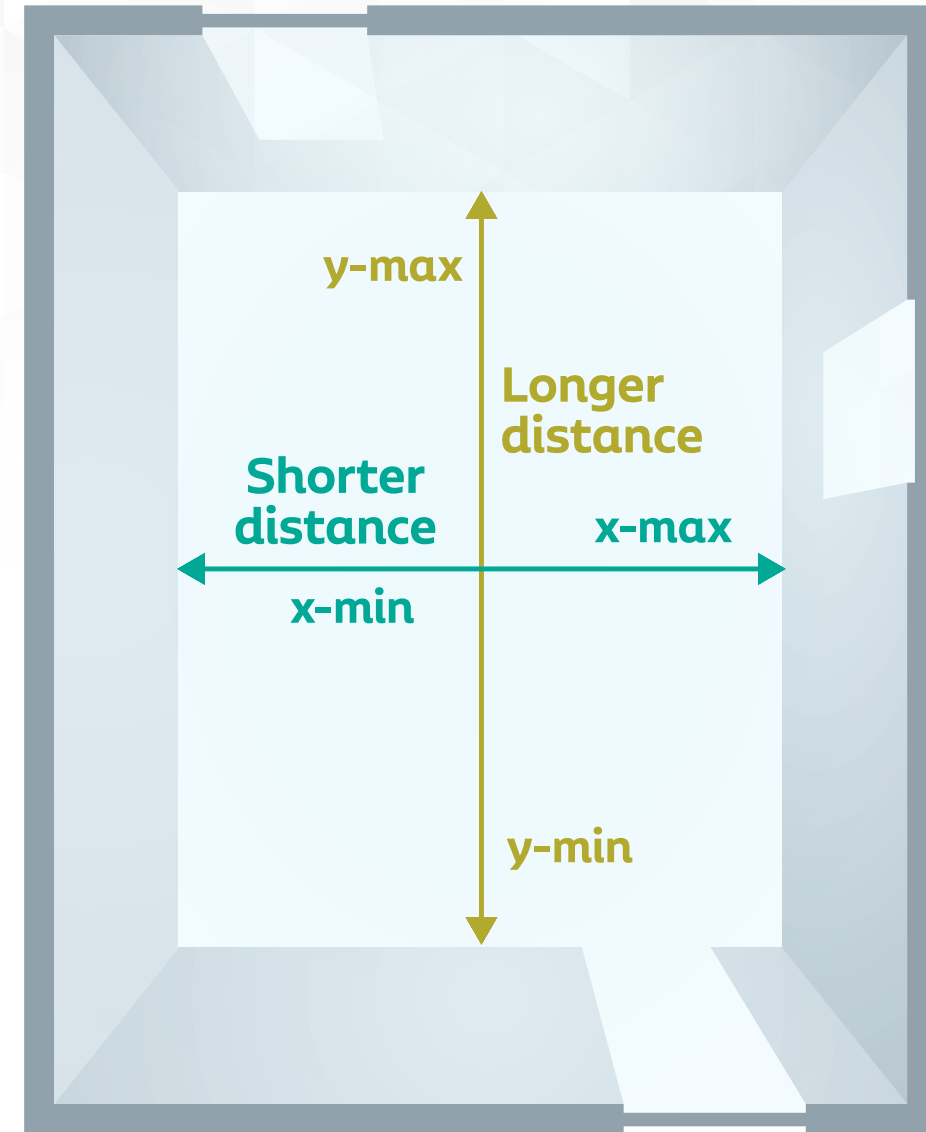

# The mounting grid

When mounting on the ceiling, think about the room as a grid.

The y-axis is parallel to the longer wall and the x-axis is parallel to the shorter wall.

If you're installing at a 45-degree rotation refer to pages 8 to 9 or for a straight orientation to pages 10 to 11.

# 45-degree rotation ceiling installation

## Basic room configuration

Mount the device in the center of the room so that the device cable is between the y-max and x-min axes.

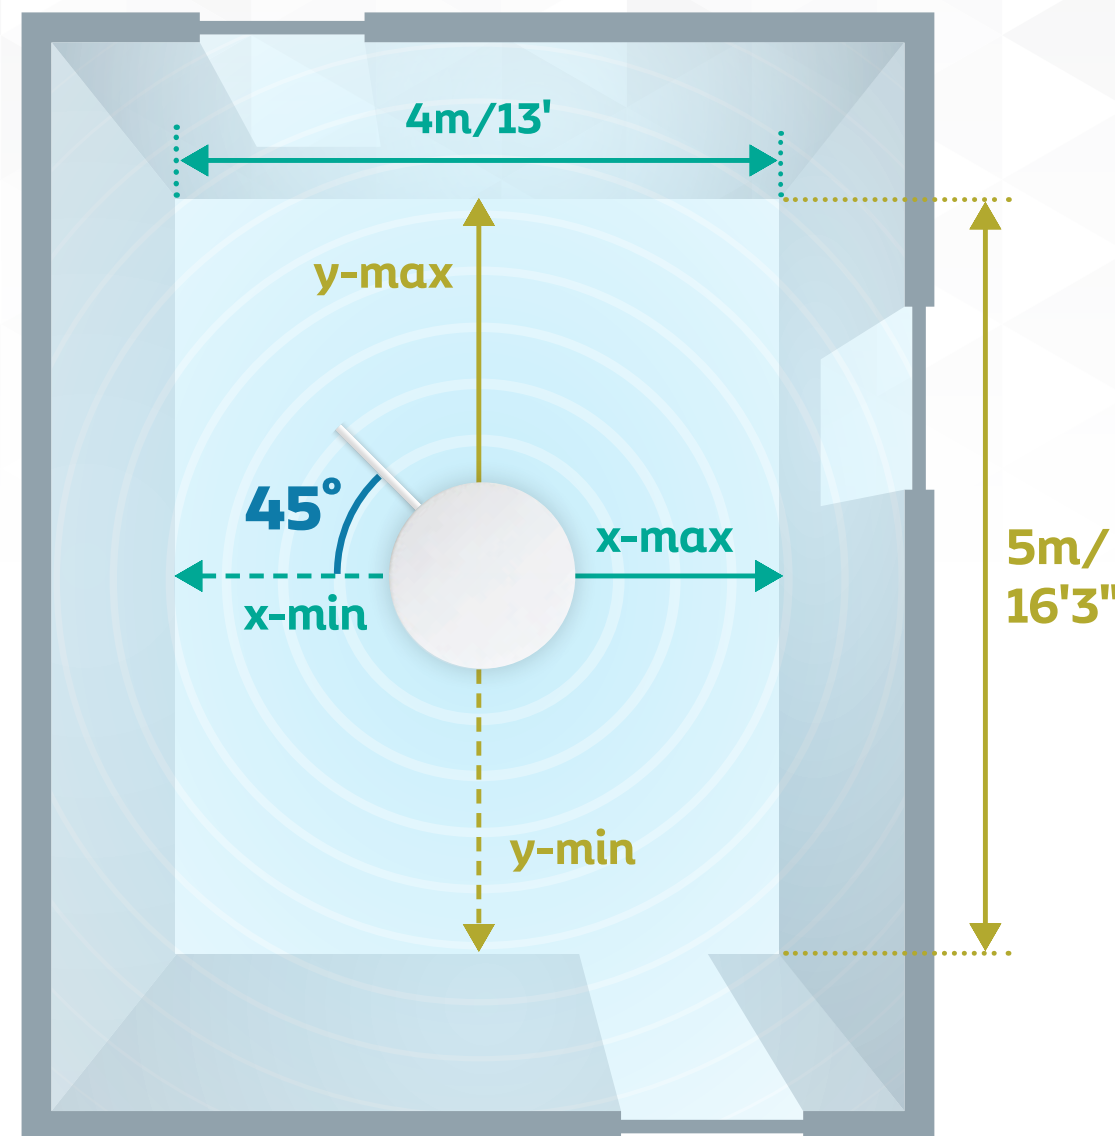

This orientation will mean that the device is on a 45-degree rotation and the cable is pointing toward the top-left corner of the room.

It's important to note that even though the device has rotated, the defined monitoring grid will not change. This means that the x and y values are the same as for straight device orientation.

### Arena Size

**X min = -2**      **Y min = -2.5**  
**X max = 2**      **Y max = 2.5**

# 45-degree rotation ceiling installation

## Subregion configuration

To configure a subregion, the x-max and y-max values must be the largest numerical values, while the x-min and y-min values must be the smallest numerical values.

In this example, the x-max value for the bed region is 2m and the y-max value for the bed is 2.5m. The x-min value for the bed region is 0 and the y-min value for the bed is 1.5m.

### Arena size

x-min = -2

x-max = 2

y-min = -2.5

y-max = 2.5

### Subregion – bed

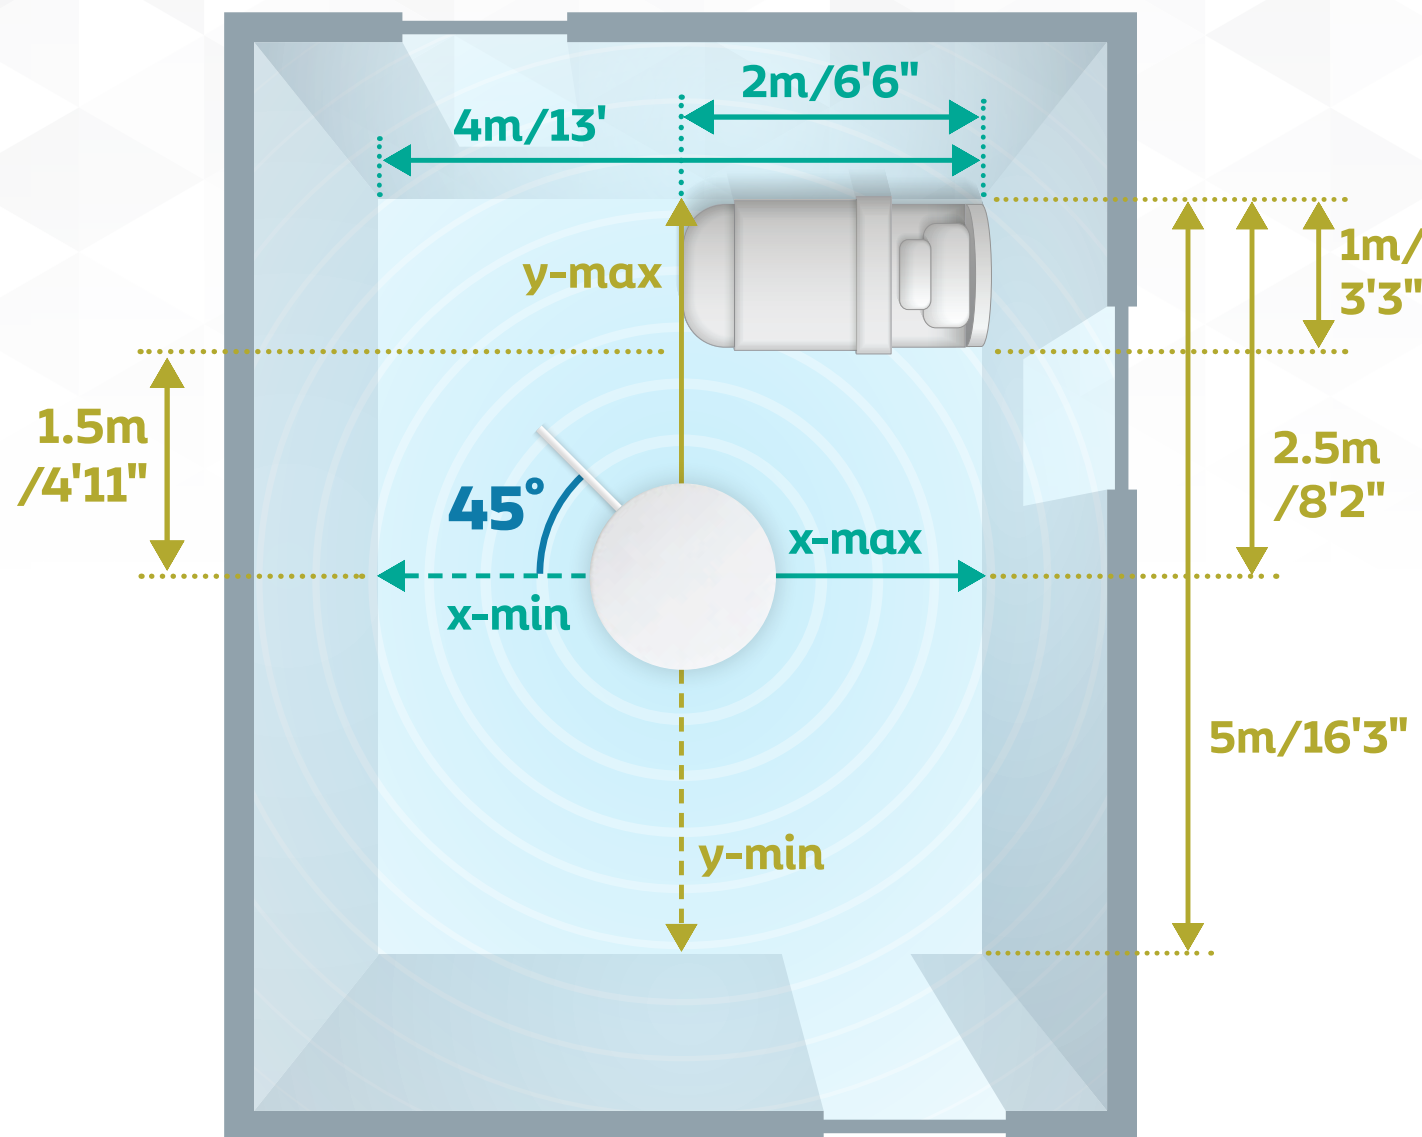

x-min = 0

x-max = 2

y-min = 1.5

y-max = 2.5

# Straight Ceiling Installation

## Basic Room Configuration

Mount the device in the center of the room so that the cable is aligned with the x-min axis with the y-min to the right of the cable and the y-max axis to the left.

### Arena size

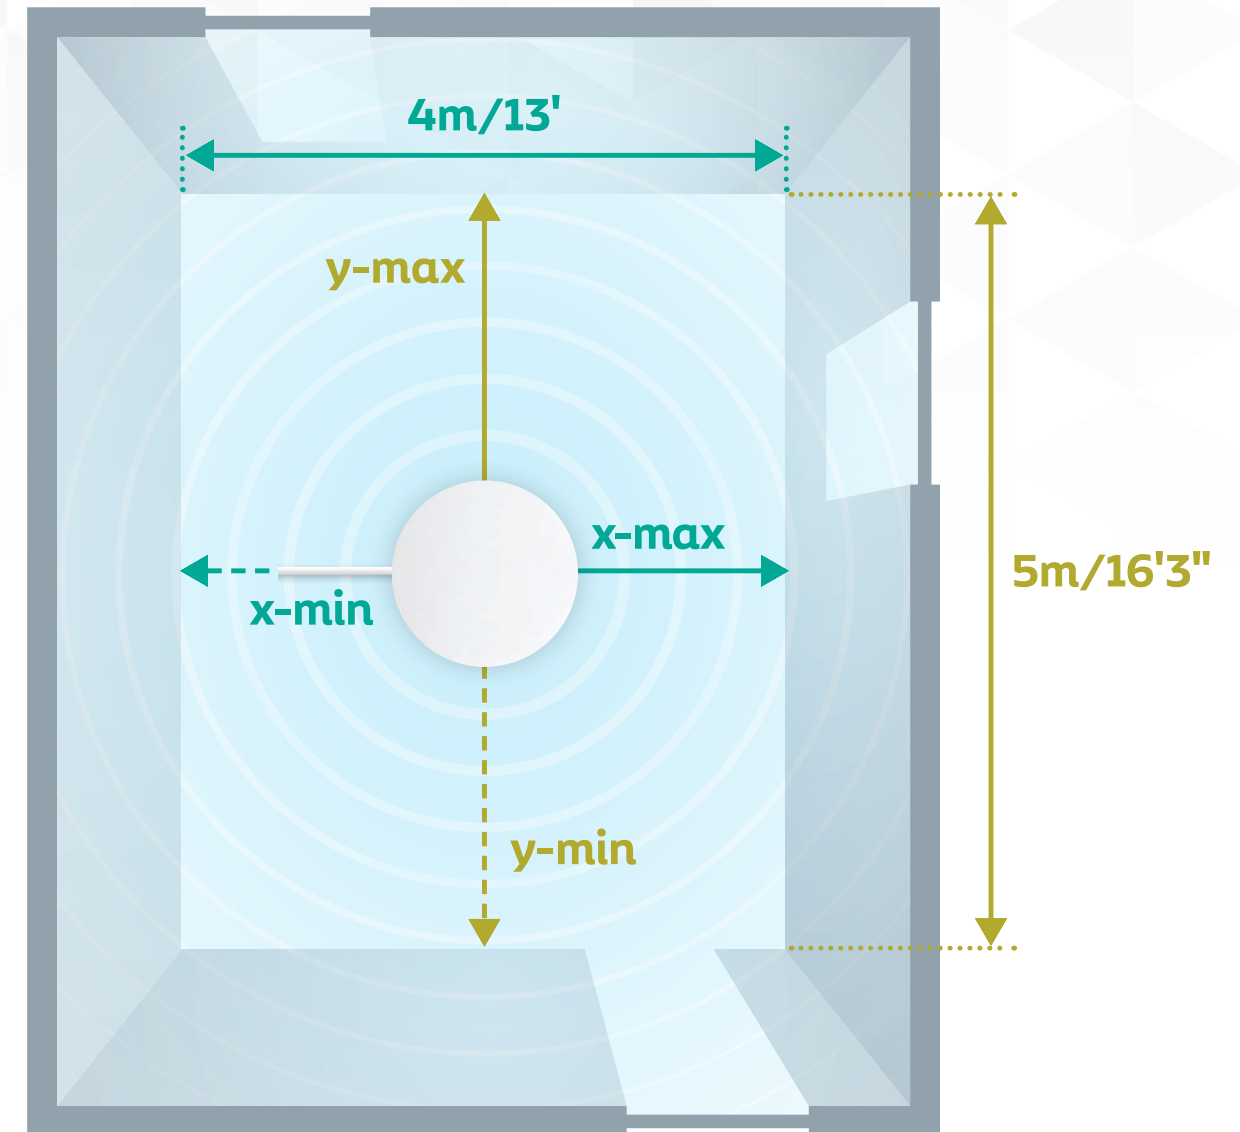

x-min = -2

y-min = -2.5

x-max = 2

y-max = 2.5

# Straight Ceiling Installation

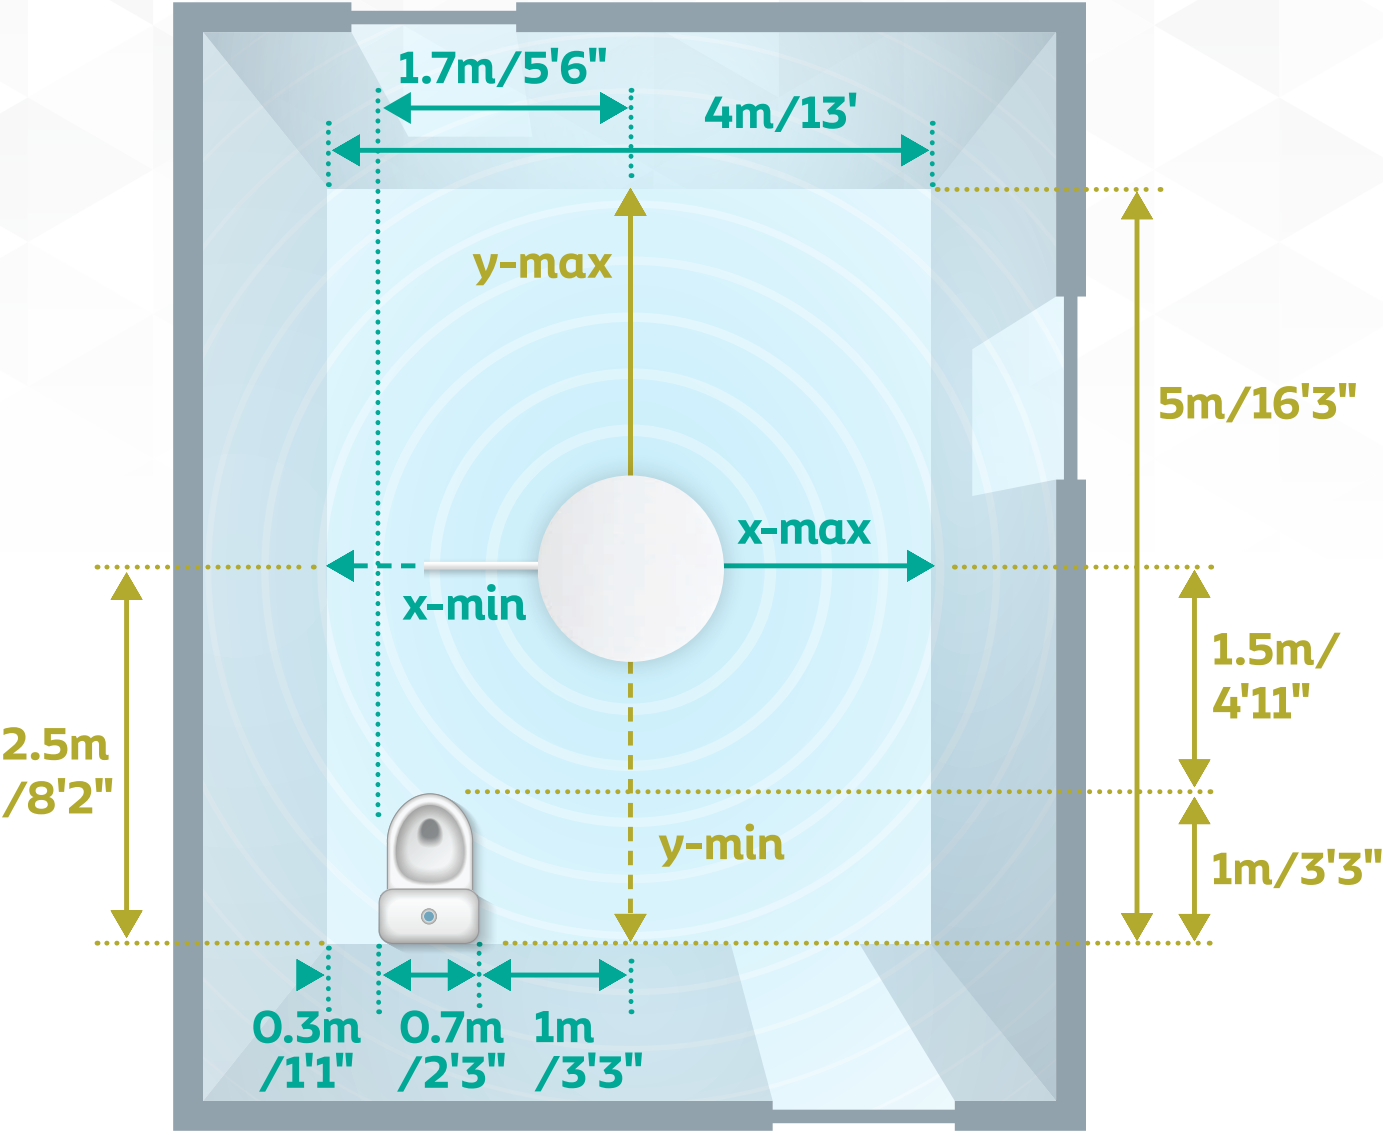

## Subregion Configuration

To configure a subregion, the x-max and y-max values must be the largest numerical values, while the x-min and y-min values must be the smallest numerical values.

In this example, the x-max value for the toilet region is -1m and the y-max value is -1.5m. The x-min value for the toilet region is -1.7m and the y-min value is -2.5m.

Arena size		Subregion – toilet	
x-min	= -2	x-min	= -1.7
x-max	= 2	x-max	= -1
y-min	= -2.5	y-min	= -2.5
y-max	= 2.5	y-max	= -1.5

# Dashboard Use

## To configure the room for the ceiling:

- ▶ Go to your Dashboard > Configuration > Room > Device.
- ▶ Once you've found your device, go to the General Details tab.
- ▶ Then choose either "Ceiling" or "Ceiling45Deg" and click "Save."
- ▶ Now, when you go to the Room Size tab, you will see tabs to enter the room dimensions.
- ▶ Enter the appropriate room dimensions for your device.
- ▶ The sensor height is the height of the ceiling and must be within the range of 2.3m/7'6" to 3m/9'9" from the floor.
